TRACE

Proven software logistics for enterprise customers.
TRACE is an out-of-the-box SAP© add-on, which enhances the standard Change and Transport Management System by providing a convenient framework for the monitoring, approval and transportation of transport requests.

SECURITY

TRACE comes with an innovative algorithm that prevents system downtimes as it detects and warns for both classical and rare transportation pitfalls, covering development and configuration requests. TRACE ensures that incorrectly transmitted or erroneously overwritten objects will never pose a threat to your production system again.

LIGHTWEIGHT

...but powerful! With just one central TRACE component customers can control all their software logistics across the entire portfolio of SAP© landscapes and instances!
For years now our clients, ranging from service providers, small sized businesses to large multinationals, have been relying on Transport Center.

PREMIUM SUPPORT

Our online support platform, which comes at no additional cost, provides backend support services from Germany. An experienced team with core product knowledge and real-life project experience delivers best practice guidelines and problem resolution in no time. This is how we established our team of ABAP-Experts over the past 20 years.

COST OF OWNERSHIP

Our clients confirm, total cost of ownership per SAP landscape drops due to savings triggered through process automation requiring far less manual intervention and efforts.
Our solution has a proven track record in preventing accidental system & process downtime, even avoiding full system restores!

UNDO

While IT and its processes in general grow in complexity **we again simplify.**

Have you ever wondered why it is not possible to undo a SAP© import after it caused issues in your production environment? The good news is, it is possible!

ABAP-Experts.com has just released the ultimate SAP© insurance policy, which allows you to undo changes introduced by an erroneous import. Despite all efforts to secure and safeguard your transports many SAP© customers have experienced there are still various reasons why things may go wrong.

With only a minimal invest you can safeguard your environment from problematic scenarios as they now can be rolled back in minutes!

DUMP PREDICTION

TransportCenter is empowered by an innovative algorithm which prevents erroneous imports as it detects and warns for overtake situations, missing or potentially dangerous objects and referential dependencies. Dump prediction covers both development and configuration transports!
Dump prediction is fully integrated within the approval workflow and cutover tools, identifying dependencies and overtake scenarios on the fly.

SEQUENCING

With the support of dump prediction it becomes easy to define specific and secure import sequences. For larger transport lists TRACE is able to assist with fully automated sequencing functions.

INSTALLATION

A typical Transport Center installation can be completed within 2 days covering installation, configuration and training.
The installation package is delivered within a dedicated SAP© namespace to ensure full independence. Once installed an intuitive configuration cockpit allows easy maintenance.
